

Project:

FARRA SMALL BATCH BREWING EQUIPMENT

Farra have been designing and manufacturing micro breweries since 1984 and we can supply the complete turnkey solution – designed, manufactured, installed and if required, fully commissioned. Now available a full range of Small Batch Brewing Equipment for the local enthusiast or a trial brewery for the larger players.

Farra Small Batch Brewing Equipment

Farra have been designing and manufacturing breweries since 1984 and we have numerous installations throughout New Zealand and Australia, including the award winning Emerson's Brewery in Dunedin. Now with an extensive range of smaller equipment, we can offer the next step for home brewers or allow larger brewers to run trial brews.

The Farra 50SBB is a compact three tier self contained brewery that utilises gravity feed, eliminating the need for pumps. Included with this unit is the Farra counter flow heat exchanger which uses minimal water and is very effective at reducing the wort to optimum yeast pitching temperature. Larger brew kits are available up to 200L; these units require pumps making them more expensive but are ideal for brew pubs or trial breweries where pumps are already available.

Farra SBB Fermenters come in a range of sizes from 30L up to 200L, with fittings to suit client's requirements; larger vessels are available from our Micro Brewery range.

All our breweries & equipment are made in our Dunedin based workshop and are designed using the powerful 3D CAD system, Solid Edge®, enabling the client to view exactly what the end result will look like. Once the design is finalised our experienced team of tradesmen set to work turning the plans into a working brewery.

Farra Stainless has the knowledge and engineering expertise to manufacture a brewery to meet our customer's needs. We pride ourselves on creating breweries which are both aesthetically pleasing and are manufactured for their ease of use and reliability. If required we can offer brewing instructions and recipes to get you started.
